PROFESSIONAL SUMMARY

Final-year Artificial Intelligence & machine Learning undergraduate with strong full-stack development expertise in the MERN stack. Skilled in building scalable web applications, RESTful APIs and efficient database systems using SQL and NoSQL. Experienced in developing responsive frontend interfaces and robust backend architectures with a focus on clean, production-ready code. Interested in integrating AI and modern DevOps practices into real-world applications.

TECHNICAL SKILLS

- **Programming language:** JavaScript, C, C++, Python.
- **Frontend:** React.js, HTML5, CSS3, Bootstrap, Material UI, Three.js, GSAP.
- **Backend:** Node.js, Express.js, REST API.
- **Database:** MySQL, MongoDB, PostgreSQL, SQLite.
- **Authentication & Security:** JWT, HTTP-only Cookies.
- **Tools & Platforms:** Git, GitHub, Postman, Render, Vercel.

EDUCATION

Bachelor of Engineering – Artificial Intelligence and Machine Learning **CGPA – 7.7**(Nov 2022 - June 2026)
PES's Modern College of Engineering, Pune - 411035.

PROJECTS

JURI-AI – AI Powered Legal Assistant Platform | Ongoing | Code *React, Express, Axios, MongoDB*
Team Project (Ongoing) | Role: Frontend Developer

- Designed Built a responsive role-based frontend (User/Admin/Lawyer) with chat UI, templates and dashboard using React. Implemented JWT-based authentication and protected routes.
- Integrated AI chat, document upload and templates by connecting frontend with backend APIs. Managed state and async API calls for smooth user interaction.
- Designed the UI to improve legal accessibility through AI assistance. Handled challenges like role-based rendering and real-time data in a scalable system.

SpeakMind – AI Chatbot Application | [Link](#) | Code *React, Node.js, Express, MongoDB*

- Built a full-stack AI chatbot with persistent chat sessions and context-aware responses using MERN stack and secure JWT authentication.
- Solved token expiry and long conversation issues using refresh tokens, sliding window memory and incremental summarization.
- Designed scalable backend architecture with custom API handling for session reliability; gained experience in AI integration and backend security.

Velmora – Hotel Booking & Listing Platform | [Link](#) | Code *EJS, Node.js, Express, MongoDB*

- Built a full-stack platform for discovering and managing hotel listings with reviews, solving real-world needs of property exploration and user-generated content. Designed to handle multiple users with dynamic listing display and interactions.
- Implemented secure authentication (Passport.js) and RESTful CRUD operations with Mapbox integration for location visualization and Cloudinary for efficient image storage and delivery.
- Structured the application using MVC architecture with validation and error handling and developed a responsive UI using EJS and Bootstrap; key challenges included map integration and file uploads.

CERTIFICATIONS & ACHIEVEMENTS

- Web Development Course – Dr. Angela Yu on Udemy
